## Total marks - 140

Attempt ALL questions.
Reference may be made to the Physics Relationships Sheet and the Data Sheet on Page two.
Write your answers clearly in the spaces provided in this booklet. Additional space for answers is provided at the end of this booklet. If you use this space you must clearly identify the question number you are attempting. Any rough work must be written in this booklet. You should score through your rough work when you have written your final copy.
Use blue or black ink.
Before leaving the examination room you must give this booklet to the Invigilator; if you do not, you may lose all the marks for this paper.

## REFRACTIVE INDICES

The refractive indices refer to sodium light of wavelength 589 nm and to substances at a temperature of 273 K.

| Substance | Refractive index | Substance | Refractive index |
| :--- | :--- | :--- | :--- |
| Diamond | 2.42 | Glycerol | 1.47 |
| Glass | 1.51 | Water | 1.33 |
| Ice | 1.31 | Air | 1.00 |
| Perspex | 1.49 | Magnesium Fluoride | 1.38 |

SPECTRAL LINES

| Element | Wavelength/nm | Colour | Element | Wavelength/nm | Colour |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Hydrogen | $\begin{aligned} & \hline 656 \\ & 486 \\ & 434 \\ & 410 \\ & 397 \\ & 389 \end{aligned}$ | Red <br> Blue-green <br> Blue-violet <br> Violet <br> Ultraviolet <br> Ultraviolet | Cadmium | $\begin{aligned} & 644 \\ & 509 \\ & 480 \end{aligned}$ | Red Green Blue |
|  |  |  | Lasers |  |  |
|  |  |  | Element | Wavelength/nm | Colour |
| Sodium | 589 | Yellow | Carbon dioxide <br> Helium-neon | $\left.\begin{array}{c} 9550 \\ 10590 \end{array}\right\}$ <br> 633 | Infrared Red |

## PROPERTIES OF SELECTED MATERIALS

| Substance | $\begin{aligned} & \text { Density/ } \\ & \mathrm{kg} \mathrm{~m}^{-3} \end{aligned}$ | Melting Point/ K | Boiling Point/K | Specific Heat Capacity/ $\mathrm{Jkg}^{-1} \mathrm{~K}^{-1}$ | Specific Latent Heat of Fusion/ $\mathrm{Jkg}^{-1}$ | Specific Latent Heat of <br> Vaporisation/ $\mathrm{Jkg}^{-1}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Aluminium | $2.70 \times 10^{3}$ | 933 | 2623 | $9.02 \times 10^{2}$ | $3.95 \times 10^{5}$ |  |
| Copper | $8.96 \times 10^{3}$ | 1357 | 2853 | $3.86 \times 10^{2}$ | $2.05 \times 10^{5}$ |  |
| Glass | $2.60 \times 10^{3}$ | 1400 |  | $6.70 \times 10^{2}$ |  |  |
| Ice | $9.20 \times 10^{2}$ | 273 |  | $2.10 \times 10^{3}$ | $3.34 \times 10^{5}$ |  |
| Glycerol | $1.26 \times 10^{3}$ | 291 | 563 | $2.43 \times 10^{3}$ | $1.81 \times 10^{5}$ | $8 \cdot 30 \times 10^{5}$ |
| Methanol | $7.91 \times 10^{2}$ | 175 | 338 | $2.52 \times 10^{3}$ | $9.9 \times 10^{4}$ | $1 \cdot 12 \times 10^{6}$ |
| Sea Water | $1.02 \times 10^{3}$ | 264 | 377 | $3.93 \times 10^{3}$ |  |  |
| Water | $1.00 \times 10^{3}$ | 273 | 373 | $4.19 \times 10^{3}$ | $3.34 \times 10^{5}$ | $2.26 \times 10^{6}$ |
| Air | $1 \cdot 29$ | . . . | . . . |  | . . . . |  |
| Hydrogen | $9.0 \times 10^{-2}$ | 14 | 20 | $1.43 \times 10^{4}$ |  | $4.50 \times 10^{5}$ |
| Nitrogen | 1.25 | 63 | 77 | $1.04 \times 10^{3}$ |  | $2.00 \times 10^{5}$ |
| Oxygen | 1.43 | 55 | 90 | $9.18 \times 10^{2}$ |  | $2.40 \times 10^{4}$ |

The gas densities refer to a temperature of 273 K and a pressure of $1.01 \times 10^{5} \mathrm{~Pa}$.

1. Water is removed from clothes during the spin cycle of a washing machine. The drum holding the clothes has a maximum spin rate of 1250 revolutions per minute.

Figure 1A
(a) Show that the maximum angular velocity of the drum is $131 \mathrm{rad} \mathrm{s}^{-1}$.

Space for working and answer
(b) At the start of a spin cycle the drum has an angular velocity of $7.50 \mathrm{rad} \mathrm{s}^{-1}$. It then takes 12.0 seconds to accelerate to the maximum angular velocity.
(i) Calculate the angular acceleration of the drum during the $12 \cdot 0$ seconds, assuming the acceleration is uniform.

Space for working and answer

1. (b) (continued)
(ii) Determine how many revolutions the drum will make during the $12 \cdot 0$ seconds.

Space for working and answer
(c) When the drum is rotating at maximum angular velocity, an item of wet clothing of mass $1.5 \times 10^{-2} \mathrm{~kg}$ rotates at a distance of 0.28 m from the axis of rotation as shown in Figure 1B.

Figure 1B

Calculate the centripetal force acting on the item of clothing.
Space for working and answer

## 1. (continued)

(d) The outer surface of the drum has small holes as shown in Figure 1C. These holes allow most of the water to be removed.

Figure 1C
(i) Explain why the water separates from the item of clothing during the spin cycle.
(ii) The drum rotates in an anticlockwise direction. Indicate on Figure 1D the direction taken by a water droplet as it leaves the drum.

Figure 1D
(iii) Explain what happens to the value of the force on an item of clothing inside the drum as it rotates at its maximum angular velocity.
2. A disc of mass 6.0 kg and radius 0.50 m is allowed to rotate freely about its central axis as shown in Figure 2A.

Figure 2A
(a) Show that the moment of inertia of the disc is $0.75 \mathrm{~kg} \mathrm{~m}^{2}$.

Space for working and answer
(b) The disc is rotating with an angular velocity of $12 \mathrm{rads}^{-1}$. A cube of mass 2.0 kg is then dropped onto the disc. The cube remains at a distance of 0.40 m from the axis of rotation as shown in Figure 2B.

Figure 2B
2. (b) (continued)
(i) Determine the total moment of inertia of the disc and cube.

Space for working and answer
(ii) Calculate the angular velocity of the disc after the cube lands.

Space for working and answer
(iii) State one assumption you have made in your response to b(ii).
(c) The cube is removed and the disc is again made to rotate with a constant angular velocity of $12 \mathrm{rads}^{-1}$. A sphere of mass 2.0 kg is then dropped onto the disc at a distance of 0.40 m from the axis as shown in Figure 2C.

Figure 2C
State whether the resulting angular velocity of the disc is greater than, the same as, or less than, the value calculated in b(ii).
You must justify your answer.
3. The International Space Station (ISS) is in orbit around the Earth.

Figure 3 A
(a) (i) The gravitational pull of the Earth keeps the ISS in orbit.

Show that for an orbit of radius $r$ the period $T$ is given by the expression

$$
T=2 \pi \sqrt{\frac{r^{3}}{G M_{E}}}
$$

where the symbols have their usual meaning.
(ii) Calculate the period of orbit of the ISS when it is at an altitude of $4.0 \times 10^{5} \mathrm{~m}$ above the surface of the Earth.

Space for working and answer
3. (continued)
(b) The graph in Figure 3B shows how the altitude of the ISS has varied over time. Reductions in altitude are due to the drag of the Earth's atmosphere acting on the ISS.

Figure 3B
(i) Determine the value of Earth's gravitational field strength at the ISS on 1 March 2014.

Space for working and answer
(ii) In 2011 the average altitude of the ISS was increased from 350 km to 400 km .

Give an advantage of operating the ISS at this higher altitude.
(c) Clocks designed to operate on the ISS are synchronised with clocks on Earth before they go into space. On the ISS a correction factor is necessary for the clocks to remain synchronised with clocks on the Earth.

Explain why this correction factor is necessary.
4. The constellation Orion, shown in Figure 4A, is a common sight in the winter sky above Scotland.

Figure 4A

Two of the stars in this constellation are known as Betelgeuse and Rigel. Their positions are shown on the Hertzsprung-Russell (H-R) diagram in Figure 4B.
4. (continued)
$\longleftarrow$ surface temperature (K)

Figure 4B
(a) Using the $\mathrm{H}-\mathrm{R}$ diagram, predict the colour of Betelgeuse.
4. (continued)
(b) The table shows some of the physical properties of Rigel.

| Property of Rigel |  |
| :--- | :--- |
| Surface temperature | $(1 \cdot 20 \pm 0 \cdot 05) \times 10^{4} \mathrm{~K}$ |
| Radius | $(5 \cdot 49 \pm 0 \cdot 50) \times 10^{10} \mathrm{~m}$ |
| Mass | $18 \pm 1$ solar masses |
| Distance to Earth | $773 \pm 150$ light years |

(i) (A) Calculate the luminosity of Rigel.
Space for working and answer
(B) State the assumption made in your calculation.
(ii) Calculate the absolute uncertainty in the value of the luminosity of Rigel.

Space for working and answer
4. (continued)
(c) Calculate the apparent brightness of Rigel as observed from the Earth.

Space for working and answer
(d) Betelgeuse is not on the Main Sequence region of the H-R diagram. Describe the changes that have taken place in Betelgeuse since leaving the Main Sequence.
5. Figure 5 A shows a snowboarder in a half pipe. The snowboarder is moving MARGIN between positions P and Q . The total mass of snowboarder and board is 85 kg .

Figure 5A
A student attempts to model the motion of the snowboarder as simple harmonic motion (SHM).
The student uses measurements of amplitude and period to produce the displacement-time graph shown in Figure 5B.

Figure 5B
(a) (i) State what is meant by the term simple harmonic motion.
5. (a) (continued)
(ii) Determine the angular frequency of the motion.

Space for working and answer
(iii) Calculate the maximum acceleration experienced by the snowboarder on the halfpipe.

Space for working and answer
(iv) Sketch a velocity-time graph for one period of this motion. Numerical values are required on both axes.

You may wish to use the square-ruled paper on Page thirty.
(v) Calculate the maximum potential energy of the snowboarder.

Space for working and answer
5. (continued)
(b) Detailed video analysis shows that the snowboarder's motion is not fully described by the SHM model.
Using your knowledge of physics, comment on possible reasons for this discrepancy.
6. The Bohr model of the hydrogen atom consists of a single electron orbiting a single proton. Due to the quantisation of angular momentum, in this model, the electron can only orbit at particular radii.
Figure 6 A shows an electron with principal quantum number $n=1$.

Figure 6A
(a) Explain what gives rise to the centripetal force acting on the electron.
6. (continued)
(b) (i) Show that the kinetic energy of the electron is given by

$$
E_{k}=\frac{e^{2}}{8 \pi \varepsilon_{0} r}
$$

where the symbols have their usual meaning.
(ii) Calculate the kinetic energy for an electron with orbital radius 0.21 nm .

Space for working and answer
(c) Calculate the principal quantum number for an electron with angular momentum $4.22 \times 10^{-34} \mathrm{~kg} \mathrm{~m}^{2} \mathrm{~s}^{-1}$.

Space for working and answer
6. (continued)
(d) Heisenberg's uncertainty principle addresses some of the limitations of classical physics in describing quantum phenomena.
(i) The uncertainty in an experimental measurement of the momentum of an electron in a hydrogen atom was determined to be $\pm 1.5 \times 10^{-26} \mathrm{~kg} \mathrm{~m} \mathrm{~s}^{-1}$.
Calculate the minimum uncertainty in the position of the electron.
Space for working and answer
(ii) In a scanning tunnelling microscope (STM) a sharp metallic tip is brought very close to the surface of a conductor. As the tip is moved back and forth, an electric current can be detected due to the movement ("tunnelling") of electrons across the air gap between the tip and the conductor, as shown in Figure 6B.

Figure 6B
According to classical physics, electrons should not be able to cross the gap as the kinetic energy of each electron is insufficient to overcome the repulsion between electrons in the STM tip and the surface.
Explain why an electron is able to cross the gap.
7. When a microwave oven is switched on a stationary wave is formed inside the oven.
(a) Explain how a stationary wave is formed.
(b) A student carries out an experiment to determine the speed of light using a microwave oven. The turntable is removed from the oven and bread covered in butter is placed inside. The oven is switched on for a short time, after which the student observes that the butter has melted only in certain spots, as shown in Figure 7A.

Figure 7A
Explain why the butter has melted in certain spots and not in others.
7. (continued)
(c) The student measures the distance between the first hot spot and fifth hot spot as 264 mm .

Figure 7B
From the data obtained by the student determine the wavelength of the microwaves.

Space for working and answer
(d) The quoted value for the frequency of the microwaves is 2.45 GHz . The student calculates the speed of light using data from the experiment.

Show that the value obtained by the student for the speed of light is $3.23 \times 10^{8} \mathrm{~m} \mathrm{~s}^{-1}$.

Space for working and answer
(e) The student repeats the experiment and obtains the following values for the speed of light,
$3.26 \times 10^{8} \mathrm{~m} \mathrm{~s}^{-1}, 3.19 \times 10^{8} \mathrm{~m} \mathrm{~s}^{-1}, 3.23 \times 10^{8} \mathrm{~m} \mathrm{~s}^{-1}, 3.21 \times 10^{8} \mathrm{~m} \mathrm{~s}^{-1}$.
Comment on both the accuracy and precision of the student's results.
8. A beam of electrons is incident on a grating as shown in Figure 8A.

Figure 8A
(a) After passing through the grating the electrons are incident on a zinc sulfide coated screen. The coating emits light when struck by electrons.

Describe the pattern observed on the screen.
(b) Scientists perform similar experiments with large molecules. One such molecule is buckminsterfullerene (C60) with a mass of $1.20 \times 10^{-24} \mathrm{~kg}$.

For C60 molecules with a velocity of $220 \mathrm{~m} \mathrm{~s}^{-1}$ estimate the slit spacing required to produce a pattern comparable to that observed for the electrons. You must justify your answer by calculation.

Space for working and answer
9. As part of a physics project a student carried out experiments to obtain values for the permeability of free space and the permittivity of free space. The results obtained by the student were
permeability of free space, $\mu_{0}=(1.32 \pm 0.05) \times 10^{-6} \mathrm{H} \mathrm{m}^{-1}$
permittivity of free space, $\varepsilon_{0}=(8.93 \pm 0.07) \times 10^{-12} \mathrm{Fm}^{-1}$
(a) State the number of significant figures in the value of each result.
(b) Use these results to determine a value for the speed of light.

Your answer must be consistent with (a).
Space for working and answer
(c) (i) Determine which of the uncertainties obtained by the student is more significant for the calculation of the speed of light.
You must justify your answer by calculation.
Space for working and answer
(ii) Calculate the absolute uncertainty in the value obtained for the speed of light.

Space for working and answer
10. (a) Two point charges $Q_{1}$ and $Q_{2}$ are separated by a distance of 0.60 m as shown in Figure 10A. The charge on $Q_{1}$ is -8.0 nC . The electric field strength at point X is zero.

Figure 10A
(i) State what is meant by electric field strength.
(ii) Show that the charge on $Q_{2}$ is $-2 \cdot 0 \mathrm{nC}$.

Space for working and answer
(iii) Calculate the electrical potential at point X .

Space for working and answer
10. (continued)
(b)

Figure 10B
(i) Calculate the electrical potential at point P .

Space for working and answer
(ii) Determine the energy required to move a charge of +1.0 nC from point $X$ to point $P$.

Space for working and answer
11. The Nobel prize winning physicist Richard Feynman once stated "things on a small scale behave nothing like things on a large scale".
Using your knowledge of physics, comment on his statement.
12. A student carries out a series of experiments to investigate properties of capacitors in a.c. circuits.
(a) The student connects a $5 \cdot 0 \mu \mathrm{~F}$ capacitor to an a.c. supply of e.m.f. $15 \mathrm{~V}_{\mathrm{rms}}$ and negligible internal resistance as shown in Figure 12A.

Figure 12A

The frequency of the a.c. supply is 65 Hz .
(i) Calculate the reactance of the capacitor.

Space for working and answer
(ii) Determine the value of the current in the circuit.

Space for working and answer
(b) The student uses the following circuit to determine the capacitance of a second capacitor.

Figure 12B

The student obtains the following data.

| Reactance $(\Omega)$ | Frequency $(\mathrm{Hz})$ |
| :---: | :---: |
| $1.60 \times 10^{6}$ | 10 |
| $6.47 \times 10^{5}$ | 40 |
| $2.99 \times 10^{5}$ | 100 |
| $1.52 \times 10^{5}$ | 200 |
| $6.35 \times 10^{4}$ | 500 |
| $3.18 \times 10^{4}$ | 1000 |

(i) On the square-ruled paper on Page thirty, plot a graph that would be suitable to determine the capacitance.
(ii) Use your graph to determine the capacitance of this capacitor.

Space for working and answer

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

ADDITIONAL SPACE FOR ANSWERS AND ROUGH WORK

## Marking Instructions

These Marking Instructions have been provided to show how SQA would mark this Specimen Question Paper.

The information in this publication may be reproduced to support SQA qualifications only on a non-commercial basis. If it is to be used for any other purpose, written permission must be obtained from SQA's Marketing team on permissions@sqa.org.uk.

Where the publication includes materials from sources other than SQA (ie secondary copyright), this material should only be reproduced for the purposes of examination or assessment. If it needs to be reproduced for any other purpose it is the user's responsibility to obtain the necessary copyright clearance.

## General Marking Principles for Advanced Higher Physics

This information is provided to help you understand the general principles you must apply when marking candidate responses to questions in this paper. These principles must be read in conjunction with the Detailed Marking Instructions, which identify the key features required in candidate responses.
(a) Marks for each candidate response must always be assigned in line with these General Marking Principles and the Detailed Marking Instructions for this assessment.
(b) Marking should always be positive. This means that, for each candidate response, marks are accumulated for the demonstration of relevant skills, knowledge and understanding: they are not deducted from a maximum on the basis of errors or omissions.
(c) There are no half marks awarded.
(d) Where a wrong answer to part of a question is carried forward and the wrong answer is then used correctly in the following part, the candidate should be given credit for the subsequent part or "follow on".
(e) Unless a numerical question specifically requires evidence of working to be shown, full marks should be awarded for a correct final answer (including units if required) on its own.
(f) Credit should be given where a diagram or sketch conveys correctly the response required by the question. It will usually require clear and correct labels (or the use of standard symbols).
(g) Marks are provided for knowledge of relevant relationships alone, but when a candidate writes down several relationships and does not select the correct one to continue with, for example by substituting values, no mark can be awarded.
(h) Marks should be awarded for non-standard symbols where the symbols are defined and the relationship is correct, or where the substitution shows that the relationship used is correct. This must be clear and unambiguous.
(i) Where a triangle type "relationship" is written down and then not used or used incorrectly, then any mark for a relationship should not be awarded.
(j) Significant figures.

Data in question is given to 3 significant figures.
Correct final answer is 8.16 J .
Final answer 8.2 J or 8.158 J or 8.1576 J - Award the final mark.
Final answer 8 J or $8 \cdot 15761 \mathrm{~J}$ - Do not award the final mark.
Candidates should not be credited for a final answer that includes:

- three or more figures too many
or
- two or more figures too few, ie accept two more and one fewer.
(k) The incorrect spelling of technical terms should usually be ignored and candidates should be awarded the relevant mark, provided that answers can be interpreted and understood without any doubt as to the meaning. Where there is ambiguity, the mark should not be awarded. Two specific examples of this would be when the candidate uses a term that might be interpreted as "reflection", "refraction" or "diffraction" (eg "defraction") or one that might be interpreted as either "fission" or "fusion" (eg "fussion").
(l) Marks are awarded only for a valid response to the question asked. For example, in response to questions that ask candidates to:
- describe, they must provide a statement or structure of characteristics and/or features;
- determine or calculate, they must determine a number from given facts, figures or information;
- estimate, they must determine an approximate value for something;
- explain, they must relate cause and effect and/or make relationships between things clear;
- identify, name, give, or state, they need only name or present in brief form;
- justify, they must give reasons to support their suggestions or conclusions, eg this might be by identifying an appropriate relationship and the effect of changing variables;
- predict, they must suggest what may happen based on available information;
- show that, they must use physics [and mathematics] to prove something, eg a given value - all steps, including the stated answer, must be shown;
- suggest, they must apply their knowledge and understanding of physics to a new situation. A number of responses are acceptable: marks will be awarded for any suggestions that are supported by knowledge and understanding of physics;
- use your knowledge of physics or aspect of physics to comment on, they must apply their skills, knowledge and understanding to respond appropriately to the problem/situation presented (for example, by making a statement of principle(s) involved and/or a relationship or equation, and applying these to respond to the problem/situation). They will be rewarded for the breadth and/or depth of their conceptual understanding.

## (m) Marking in calculations

## Question:

The current in a resistor is 1.5 amperes when the potential difference across it is 7.5 volts. Calculate the resistance of the resistor ( 3 marks).

## Candidate answer

$1 \quad V=I R$
$7 \cdot 5=1 \cdot 5 R$
$R=5 \cdot 0 \Omega$
$5 \cdot 0 \Omega$
$5 \cdot 0$
$4.0 \Omega$
$5 \ldots \Omega$
6
$R=\frac{V}{I}=\frac{7 \cdot 5}{1 \cdot 5}=4 \cdot 0 \Omega$
$R=\frac{V}{I}=4 \cdot 0 \Omega$
$R=\frac{V}{I}=\_\Omega$
$R=\frac{V}{I}=\frac{7 \cdot 5}{1 \cdot 5}=-\Omega$
10

11
$R=\frac{V}{I}=\frac{7 \cdot 5}{1 \cdot 5}=4 \cdot 0$
$R=\frac{V}{I}=\frac{1 \cdot 5}{7 \cdot 5}=5 \cdot 0 \Omega$

## Mark \& comment

1 mark: relationship
1 mark: substitution
1 mark: correct answer
3 marks: correct answer
2 marks: unit missing
0 marks: no evidence, wrong answer
0 marks: no working or final answer
2 marks: arithmetic error
1 mark: relationship only
1 mark: relationship only

2 marks: relationship \& subs, no final answer

2 marks: relationship \& subs, wrong answer
1 mark: relationship but wrong substitution
$12 R=\frac{V}{I}=\frac{75}{1 \cdot 5}=5 \cdot 0 \Omega$
$13 R=\frac{I}{V}=\frac{1 \cdot 5}{7 \cdot 5}=5 \cdot 0 \Omega$
$14 \quad V=I R$
$7 \cdot 5=1 \cdot 5 \times R$
$R=0 \cdot 2 \Omega$
$15 V=I R$ $R=\frac{I}{V}=\frac{1 \cdot 5}{7 \cdot 5}=0 \cdot 2 \Omega$

1 mark: relationship but wrong substitution
0 marks: wrong relationship

2 marks: relationship \& subs, arithmetic error

1 mark: relationship correct but wrong rearrangement of symbols

## Detailed Marking Instructions for each question

|  | est |  | Expected response | Max mark | Additional guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | a |  | $\begin{align*} \omega & =\frac{\theta}{t}  \tag{1}\\ & =\frac{1250 \times 2 \times \pi}{60}  \tag{1}\\ & =131 \mathrm{rads}^{-1} \end{align*}$ | 2 | If final answer is not shown then maximum of 1 mark can be awarded. |
| 1 | b | i | $\begin{align*} \alpha & =\frac{\omega_{1}-\omega_{0}}{t}  \tag{1}\\ & =\frac{131-7 \cdot 50}{12}  \tag{1}\\ & =10 \cdot 3 \mathrm{rads}^{-2} \tag{1} \end{align*}$ | 3 | $\begin{aligned} & \text { Accept: } \\ & 10 \\ & 10 \cdot 3 \\ & 10 \cdot 29 \\ & 10 \cdot 292 \end{aligned}$ |
| 1 | b | ii | $\begin{align*} \theta & =\omega_{0} t+\frac{1}{2} \alpha t^{2}  \tag{1}\\ & =7 \cdot 50 \times 12 \cdot 0+0 \cdot 5 \times 10 \cdot 3 \times 12 \cdot 0^{2}  \tag{1}\\ & =831 \cdot 6 \mathrm{(rad})  \tag{1}\\ \text { revolutions } & =\frac{831 \cdot 6}{2 \pi}  \tag{1}\\ & =132 \tag{1} \end{align*}$ | 5 | If candidate stops here unit must be present for mark 3. <br> Accept: <br> 130 <br> 132 <br> $132 \cdot 4$ <br> $132 \cdot 35$ |
| 1 | c |  | $\begin{align*} \text { centripetal force } & =m \omega^{2} r  \tag{1}\\ & =1.5 \times 10^{-2} \times 131^{2} \times 0.28  \tag{1}\\ & =72 \mathrm{~N} \tag{1} \end{align*}$ | 3 | $\begin{aligned} & \text { Accept: } \\ & 70 \\ & 72 \\ & 72 \cdot 1 \\ & 72 \cdot 08 \end{aligned}$ |
| 1 | d | i | The drum exerts a centripetal/central force on the clothing.(1) <br> No centripetal/central force acting on water. (1) | 2 |  |

| Question |  |  | Expected response | Max mark | Additional guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | d | ii | (1) | 1 |  |
| 1 | d | iii | Centripetal force decreases ... <br> as mass of wet clothing decreases (1) | 2 |  |
| 2 | a |  | $\begin{align*} I & =\frac{1}{2} m r^{2}  \tag{1}\\ & =0 \cdot 5 \times 6 \cdot 0 \times 0 \cdot 50^{2}  \tag{1}\\ & =0.75 \mathrm{~kg} \mathrm{~m}^{2} \end{align*}$ | 2 | If final answer is not shown then maximum of 1 mark can be awarded. |
| 2 | b | i | 2 kg mass: $\begin{align*} I & =m r^{2}  \tag{1}\\ & =2 \cdot 0 \times 0 \cdot 40^{2}  \tag{1}\\ & =0.32\left(\mathrm{~kg} \mathrm{~m}^{2}\right) \\ \text { Total } & =0.32+0.75=1.1 \mathrm{~kg} \mathrm{~m}^{2} \tag{1} \end{align*}$ | 3 | Accept: 1 $1 \cdot 1$ 1.07 1.070 |
| 2 | b | ii | $\begin{align*} I_{1} \omega_{1} & =I_{2} \omega_{2}  \tag{1}\\ 0.75 \times 12 & =1 \cdot 1 \times \omega_{2}  \tag{1}\\ \omega_{2} & =8 \cdot 2 \mathrm{rad} \mathrm{~s}^{-1} \tag{1} \end{align*}$ | 3 | Accept: <br> 8 <br> $8 \cdot 2$ <br> $8 \cdot 18$ <br> $8 \cdot 182$ <br> Also accept 8.4 if 1.07 is clearly used. |
| 2 | b | iii | No external torque acts on system. <br> Or, 2 kg can be considered as a point mass | 1 |  |
| 2 | c |  | - the (final) angular velocity will be greater <br> - the final moment of inertia is less than in b(ii) | 2 | Reference must be made to moment of inertia for the second mark. Insufficient to say "sphere rolls off" |

| Question |  |  | Expected response | Max mark | Additional guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | without effect on moment of inertia. |
| 3 | a | i | $\left[\begin{array}{l} \frac{G M_{E} m}{r^{2}}=m \omega^{2} r \\ \omega=\frac{2 \pi}{T} \\ \frac{G M_{E} m}{r^{2}}=m \frac{4 \pi^{2}}{T^{2}} r  \tag{1}\\ T=2 \pi \sqrt{\frac{r^{3}}{G M_{g}}} \end{array}\right.$ | 2 | To access any marks candidates must start with equating the forces/ acceleration. <br> A maximum of 1 mark if final equation is not shown. |
| 3 | a | ii | $\begin{align*} T & =2 \pi \sqrt{\frac{\left(6 \cdot 4 \times 10^{6}+4 \cdot 0 \times 10^{5}\right)^{3}}{6 \cdot 67 \times 10^{-11} \times 6 \cdot 0 \times 10^{24}}}  \tag{1}\\ & =5 \cdot 6 \times 10^{3} \mathrm{~s} \tag{1} \end{align*}$ | 2 | Accept: <br> 6 <br> $5 \cdot 6$ <br> 5•57 <br> 5.569 |
| 3 | b | i | Value from graph $4.15 \times 10^{5}(\mathrm{~m})$ $\begin{align*} m g & =\frac{G M_{E} m}{r^{2}}  \tag{1}\\ g & =\frac{G M_{E}}{r^{2}}  \tag{1}\\ & =\frac{6.67 \times 10^{-11} \times 6.0 \times 10^{24}}{\left(4.15 \times 10^{5}+6.4 \times 10^{6}\right)^{2}} \\ & =8.6 \mathrm{Nkg}^{-1} \tag{1} \end{align*}$ | 4 | Accept: <br> 9 <br> 8.6 <br> 8.62 <br> $8 \cdot 617$ |
| 3 | b | ii | Less atmospheric drag/friction or will reduce running costs. (1) | 1 |  |
| 3 | c |  | The gravitational field is smaller at the ISS (compared to Earth). (1) <br> The clocks on ISS will run faster (than those on Earth). (1) | 2 |  |
| 4 | a |  | Betelgeuse will look red-orange. | 1 |  |
| 4 | b | iA | $\begin{align*} & L=4 \pi r^{2} \sigma T^{4}  \tag{1}\\ & L=4 \times \pi \times\left(5 \cdot 49 \times 10^{10}\right)^{2} \times 5 \cdot 67 \times 10^{-8} \times\left(1 \cdot 20 \times 10^{4}\right)^{4}  \tag{1}\\ & L=4 \cdot 45 \times 10^{31} \mathrm{~W} \tag{1} \end{align*}$ | 3 | Accept: $\begin{aligned} & 4.5 \times 10^{31} \\ & 4.45 \times 10^{31} \\ & 4.453 \times 10^{31} \\ & 4.4531 \times 10^{31} \end{aligned}$ |

| Question |  |  | Expected response | Max mark | Additional guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 4 | b | iB | Rigel/stars behave as black body(ies). | 1 |  |
| 4 | b | ii | $\begin{align*} & \% \Delta r=\frac{0 \cdot 50}{5 \cdot 49} \times 100 \%=9 \cdot 1 \%  \tag{1}\\ & \% \Delta T=\frac{0 \cdot 05}{1 \cdot 20} \times 100 \%=4 \cdot 2 \%  \tag{1}\\ & \text { Total } \% \Delta=\sqrt{(9 \cdot 1 \times 2)^{2}+(4 \cdot 2 \times 4)^{2}}  \tag{1}\\ & =25 \% \\ & \Delta \mathrm{~L}=4 \cdot 45 \times 10^{31} \times 0 \cdot 25=1 \times 10^{31} \mathrm{~W} \tag{1} \end{align*}$ | 4 | Accept: <br> $1 \cdot 1$ <br> $1 \cdot 11$ |
| 4 | c |  | $\begin{align*} b & =\frac{L}{4 \pi r^{2}} \\ & =\frac{11}{4 \times \pi \times\left(773 \times 365 \times 24 \times 60 \times 60 \times 3.00 \times 10^{8}\right)^{2}} \tag{1} \end{align*}$ <br> For ly to m conversion (1) $\begin{equation*} =6.62 \times 10^{-8} \mathrm{Wm}^{-2} \tag{1} \end{equation*}$ | 4 | Accept: $\begin{aligned} & 6 \cdot 6 \times 10^{-8} \\ & 6 \cdot 62 \times 10^{-8} \\ & 6 \cdot 621 \times 10^{-8} \\ & 6 \cdot 6212 \times 10^{-8} \end{aligned}$ <br> The use of $3 \cdot 14$ or $365 \cdot 25$ may give 6.61. |
| 4 | d |  | Any two from: <br> - (Most) hydrogen fusion has stopped. <br> - Radius has (significantly) increased. <br> - Surface temperature has decreased. <br> - Core gets hotter. | 2 |  |
| 5 | a | i | Acceleration is proportional to displacement (from a fixed point) and is always directed to (that) fixed point. Or <br> The unbalanced force is proportional to the displacement (from a fixed point) and is always directed to (that) fixed point. | 1 | Accept: $\begin{gathered} F=-k x \\ \text { or } \\ a=-k x \end{gathered}$ |
| 5 | a | ii | From graph $T=5 \cdot 0$ (s) $\begin{align*} & \rightarrow f=\frac{1}{T}=\frac{1}{5 \cdot 0}=0 \cdot 20 \mathrm{~s}  \tag{1}\\ \omega & =2 \pi f  \tag{1}\\ & =2 \times \pi \times 0 \cdot 20  \tag{1}\\ & =1 \cdot 3 \mathrm{rad} \mathrm{~s}^{-1} \tag{1} \end{align*}$ | 4 | Accept: <br> 1 <br> $1 \cdot 3$ <br> $1 \cdot 26$ <br> $1 \cdot 257$ <br> Use of $\omega=\frac{2 \pi}{T}$ <br> is possible. |

| Question |  |  | Expected response | Max mark | Additional guidance |

area $=4 \pi r^{2}$
volume $=\frac{4}{3} \pi r^{3}$

## Trigonometry

$\sin \theta=\frac{\text { opposite }}{\text { hypotenuse }}$
$\cos \theta=\frac{\text { adjacent }}{\text { hypotenuse }}$
$\tan \theta=\frac{\text { opposite }}{\text { adjacent }}$
$\sin ^{2} \theta+\cos ^{2} \theta=1$

## Moment of inertia

point mass
$I=m r^{2}$
rod about centre
$I=\frac{1}{12} m l^{2}$
rod about end
$I=\frac{1}{3} m l^{2}$
disc about centre
$I=\frac{1}{2} m r^{2}$
sphere about centre
$I=\frac{2}{5} m r^{2}$

Table of standard derivatives

| $f(x)$ | $f^{\prime}(x)$ |
| :--- | :--- |
| $\sin a x$ | $a \cos a x$ |
| $\cos a x$ | $-a \sin a x$ |

Table of standard integrals

| $f(x)$ | $\int f(x) d x$ |
| :--- | :--- |
| $\sin a x$ | $-\frac{1}{a} \cos a x+C$ |
| $\cos a x$ | $\frac{1}{a} \sin a x+C$ |

Electron Arrangements of Elements

| Group $3$ | Group <br> 4 | Group 5 | Group <br> 6 | Group 7 | Group 0 |
| :---: | :---: | :---: | :---: | :---: | :---: |
